## The New Multicleat/Multistrap

Introducing the New Improved Prysmian Multicleat/Multistrap System!

When it was launched the Multicleat/Multistrap system revolutionized the cable cleating industry by offering a flexible system that can cope with all installation challenges. It has been copied by many but never surpassed!

The new and improved mechanism includes the winding pin, lock nut and plastic winder to secure the strap. This makes the installation process easier and quicker for the user.

The Multicleat/Multistrap system including the Low Smoke Zero Halogen liners are now sold together to make the choice of product easier for the user. The Low Smoke Zero Halogen liner acts as a barrier between the cable bracket and the cable sheath, providing added protection for your valuable cable infrastructure.

Head over to our Trefoil fixings section of the BiCon Components website to find out more about the features of the Multicleat/Multistrap.

If you have any questions about the Multicleat/Multistrap, please email [biconcomponents@prysmian.com](mailto:biconcomponents@prysmian.com)
